

Lemnis Technologies Pte. Ltd.

www.lemnis.tech

Lemnis Technologies is a team of accomplished researchers tackling the fundamental flaw in today's Virtual Reality: VR sickness. We build the software platform and hardware design that will drive next-generation headsets and make VR viable as the next computing platform.

Job Opportunity: **Software developer intern**

We are seeking a highly-motivated intern who can contribute to the software developed at Lemnis Technologies. You will be part of a small team of engineers and scientists whose expertise range from computer vision and computer graphics to optics and machine learning, and who published in top-tier research venues (SIGGRAPH, SIGGRAPH Asia, ICCV, Photonics West...).

You will have the opportunity to contribute to the core technologies that will drive major VR headsets in the next generation.

The role as a Software developer intern requires strong software development skills in C#; experience in C++, Java, Android programming are a plus. You will contribute to the development of the backend system, software development kit, and demo applications showcasing the technology developed at Lemnis Technologies.

Join a world class team and build the future of VR/AR! Contact us at jobs@lemnis.tech
